Automating Employee Data

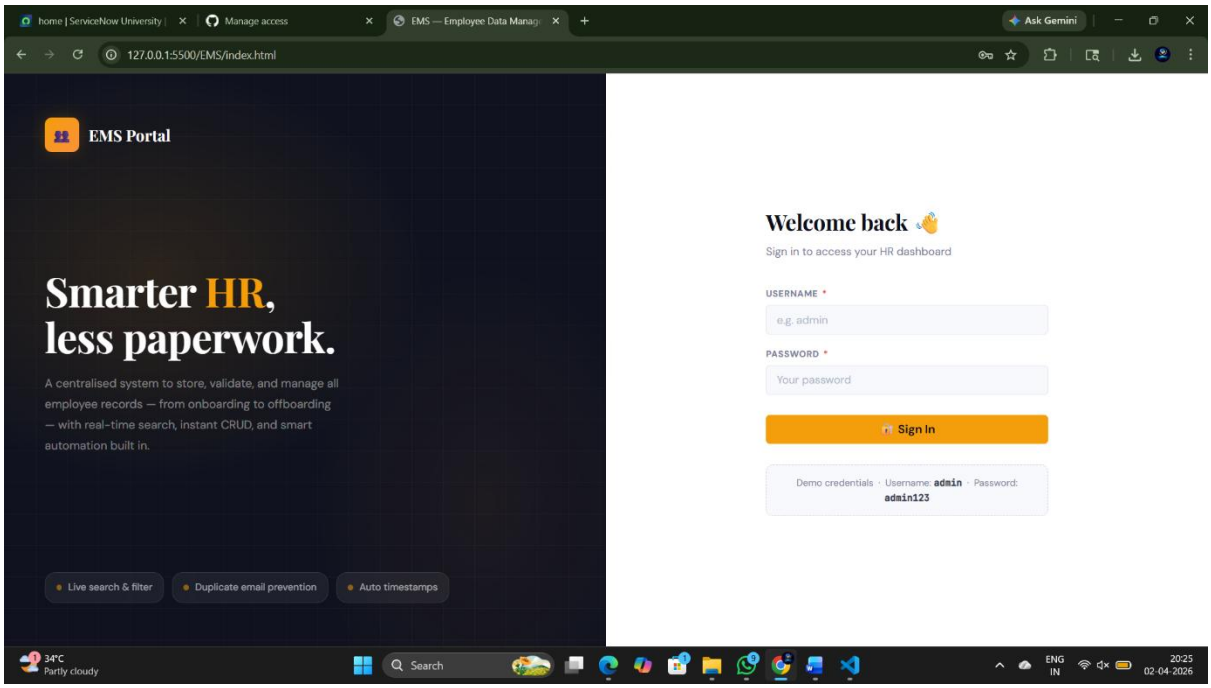
Introduction:-

The **Automating Employee Data Management System** is a web-based application designed to simplify and automate the process of managing employee records within an organization.Traditionally, employee data such as personal details, department, role, and status are maintained manually, which leads to errors, duplication, and time-consuming administrative work. This system eliminates those issues by providing a centralized digital platform.

Procedure:-

Step1:-

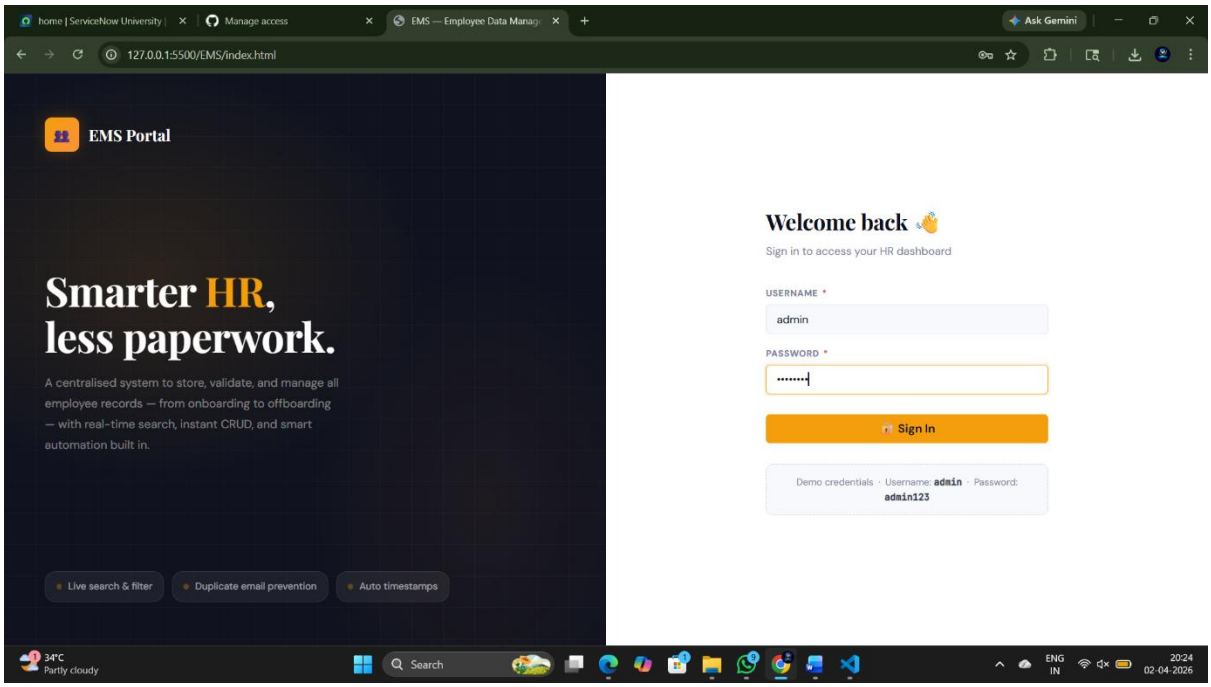
The login page allows HR users to log in.



Step2:-

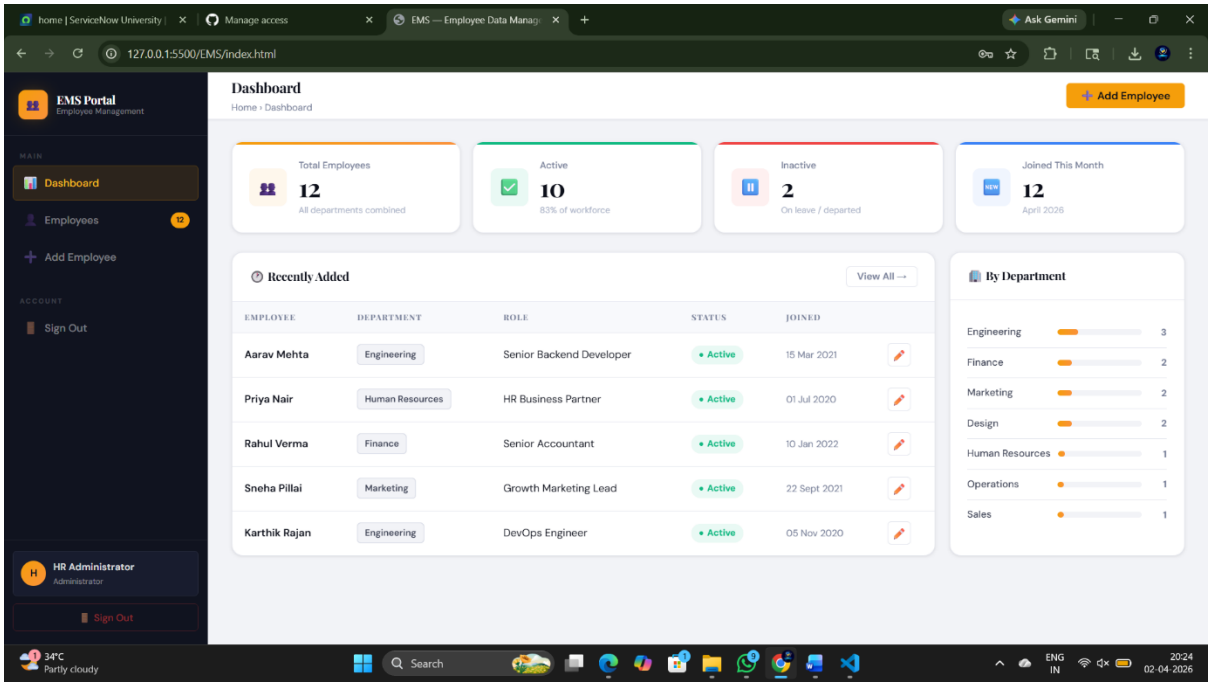
HR users to log in securely to access and manage employee data.

Eg(Username:admin , Password:admin123)



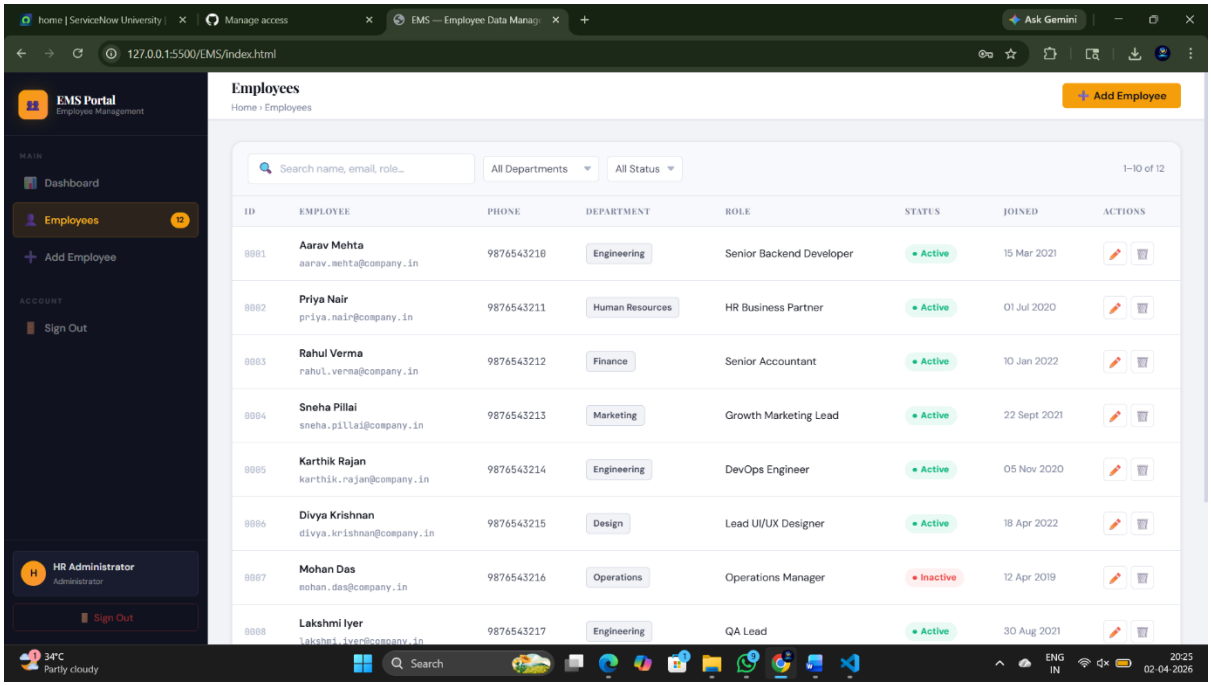
Step3:-

The dashboard shows total employees, their status, and recent employee details.



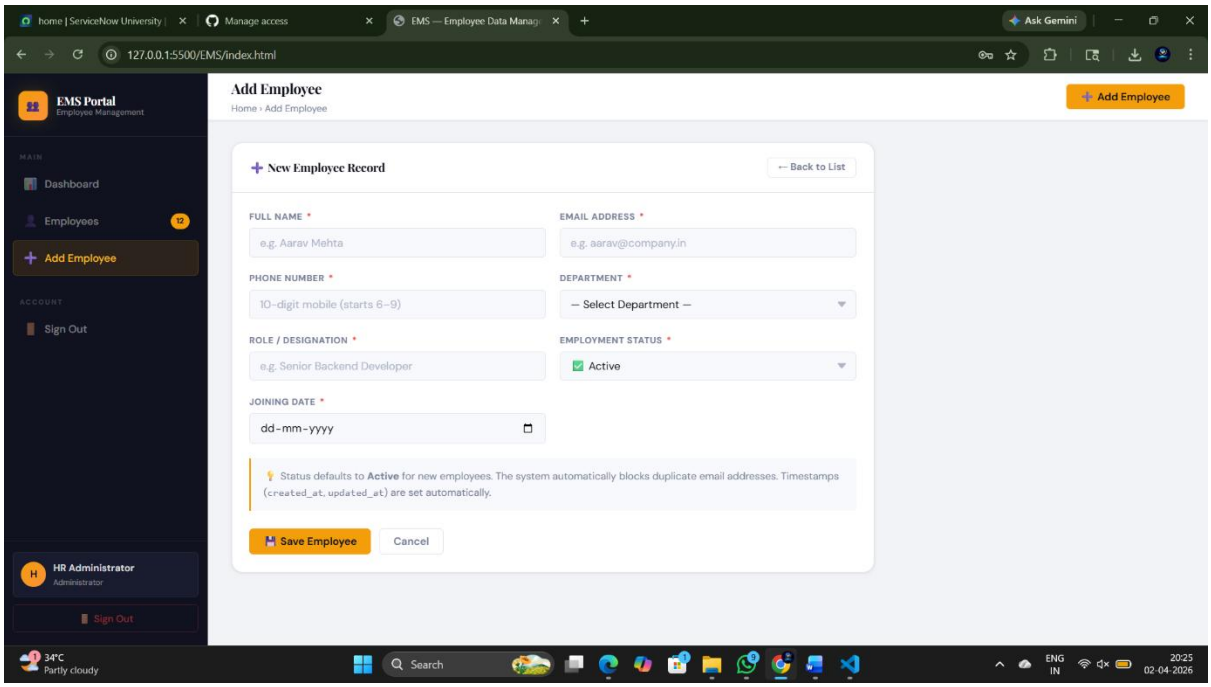
Step4:-

The employees page displays all employee details with options to search, filter, edit, and delete records easily.



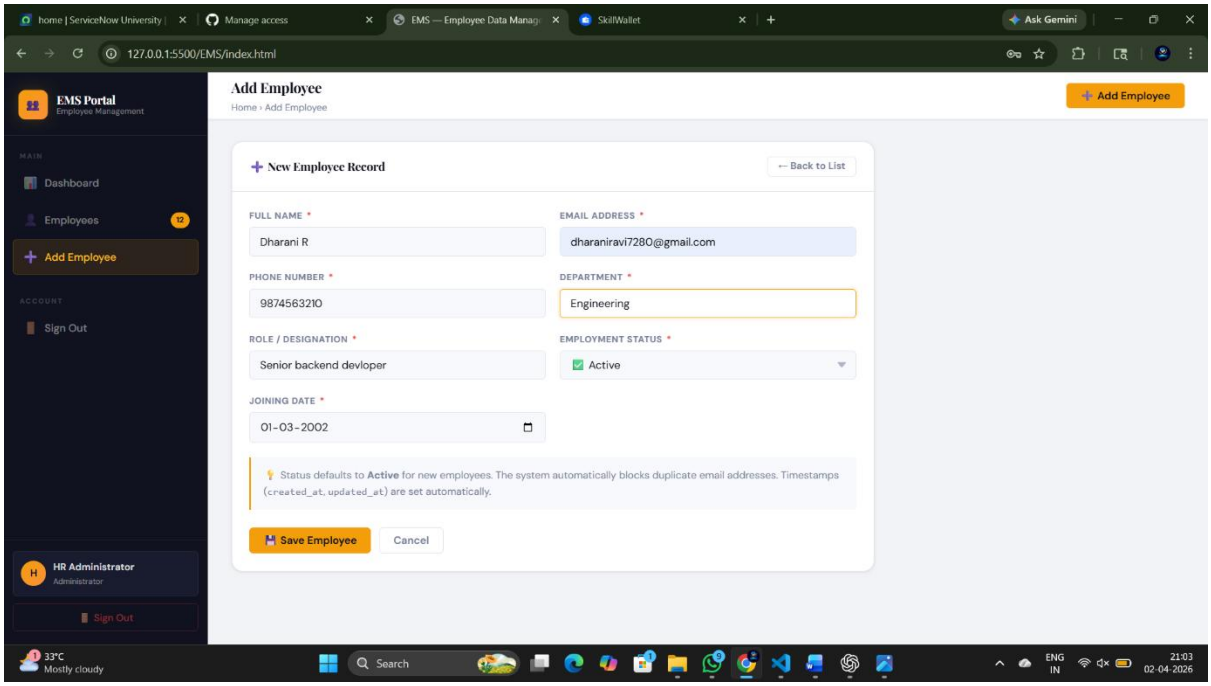
Step5:-

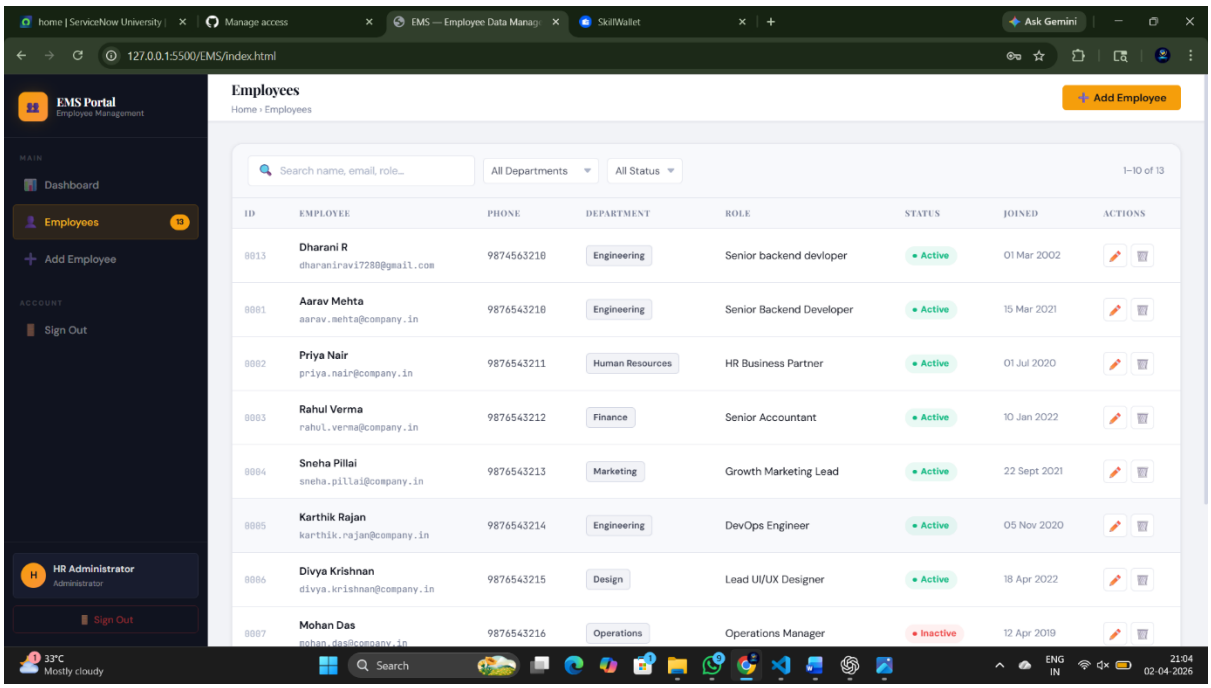
The add employee page allows HR to enter and save new employee details into the system.



Step6:-

This form is used to enter employee details and add employee into the system(eg:-Dharani).



Step7:-


The entered details are saved and displayed in the dashboard.
